

I selected these status codes for a clear and structured response format, resembling HTTP status codes. This approach simplifies interpretation and implementation for developers. Status codes rationale:

- 200-299 (2xx): Success codes indicate successful operations, with specific codes identifying the completed action.
- 400-499 (4xx): Client error codes signal client request errors or client state issues, guiding devs resolving client-side problems.

Status Code	Message
200	▪ Connection successful
201	▪ Disconnection successful
202	▪ Help listed
203	▪ Users listed
204	▪ User information retrieved
205	▪ Message sent successfully
206	▪ Messages listed
207	▪ Subscribed to team
208	▪ Unsubscribed from team
209	▪ Context specified
210	▪ Resource created
211	▪ Sub-resources listed
212	▪ Context information retrieved
213	▪ Subscribed teams listed
214	▪ Server event
400	▪ Connection denied
401	▪ Cannot unsubscribe from team
402	▪ Cannot specify context
403	▪ Cannot create resource
404	▪ Cannot list sub-resources
405	▪ Cannot retrieve context information
406	▪ Command not found
407	▪ Not logged in
408	▪ Resource already exists
409	▪ Action not authorized
410	▪ Unknown team
411	▪ Unknown channel
412	▪ Unknown thread
413	▪ Unknown user
